ACKNOWLEDGMENTS

I would like to acknowledge the assistance of the many scholars and dedicated professionals who helped and encouraged me as this dissertation took final form. My adviser, Professor Tony Judt, not only shared his vast knowledge and insights with me but helped me keep on track and on schedule. I cannot begin to express my gratitude to Professor Bert Hansen whose interest, wisdom, advice and friendship are immeasurable. I am also grateful to Professor Linda Nochlin of New York University's Institute of Fine Arts, to Professor Gerald Geisson of Princeton University and to Professor Robert Scally of New York University for their insights and helpful comments. The professional staff of the Frick Art Reference Library and the Academy of Medicine in New York and of the Musee De L'Assistance Publique and the Pasteur Institute in Paris were extremely cooperative and helpful.

Most of all, I would like to thank my wife Annette who gave up so much to help see this through. She took on so many extra burdens so that I would be free to work. It surely would not have happened without her.
