## ABSTRACT

This point layer was created using the GTFS data feeds from the Metropolitan Transportation Authority (MTA). It represents the stop locations for the MTA Metro North railroad east of the Hudson River, where a stop represents a train station (specifically the center point of the track in front of the station) that serves one or more routes. A python script was written to take the data files as input and plot and save them as a spatial layer in the local state plane coordinate reference system. The unique ID is stop\_id, a field created by the MTA. This layer was created as part of the NYC Mass Transit Spatial Layers series, and is updated biannually to account for changes in the transit system.

## PURPOSE

This dataset is intended for researchers, policy makers, students, and educators for basic geographic analysis and mapping purposes. It was created by the GIS Lab at the Newman Library at Baruch College CUNY as part of the NYC Mass Transit Spatial Layers series, so that members of the public could have access to well-documented and readily-usable GIS layers of NYC mass transit features.

### LINEAGE

#### LINEAGE STATEMENT

This point layer was created using the data feeds from the Metropolitan Transportation Authority (MTA). The MTA provides text files that contain route information in a General Transit Feed Specification (GTFS) format that are geographically referenced so they are able to be plotted. A python script was written to take the text files as input and plot and save them as a spatial layer. The text file used for plotting is 'stops.txt' and provides geographically referenced data for the stops in the form of points. Stops that represented shuttle bus and ferry stops and the Shore Line East railroad stations in Connecticut were removed. The final layer was reprojected from NAD 83 to NY State Plane Long Island in feet. Counties from the Census TIGER files were spatially joined to the transit features, so that every transit feature was assigned the state-county ANSI FIPS code (GEOID) to indicate its location. The unique ID is stop\_id, a field created by the MTA. This layer was created as part of the NYC Mass Transit Spatial Layers series, and is updated biannually to account for changes in the transit system.
